Zero Trust Application Access Release Notes

This document is the release notes for InstaSafe Zero Trust Application Access (ZTAA) features which were released in June 2023. This document contains information on enhancements to app.instasafe.io console, ZTAA agent, ZTNA and the gateways which include feature enhancements and bugs resolved. In case of discrepancy between information given in release notes and Product documentation, information given in release notes is to be assumed correct.

- Authenticator App version 1.2.22 for Android was released in Google PlayStore.
- No new versions of ZTAA Agent or ZTNA or gateways are getting released

General Notes

1. Minor modifications and Bug Fixes not significantly affecting the user experience are not a part of the release notes.
2. Multiple bug fixes or enhancements relating to a particular feature are not separately featured in release notes.

Major Enhancements

Component	Enhancements
Console	- Maximum Transfer Unit (MTU) configuration introduced at user level to allow users to access network applications when they are connected from a low bandwidth. - Single installer for ZTAA, ZTNA along with associated dependencies for Windows. - Feature to allow web & SAML application access from selected list of countries. - Enhancement to Tenant Apps audit report to identify SAML integrated applications. - Feature for users to get notified of their domain if they have forgotten the same.

Major Bug Fixes

Sl. No	Description
1	Issue with user profiles not retained after upgrade to Authenticator App version 1.2.8 was addressed in the Authenticator App version 1.2.22.
2	Issue with Authenticator App push notifications not working when the app was not open was addressed.
3	Issues in the Session logs have been addressed.
4	Minor UI fixes in the Application Groups page.
5	Input validations in multiple screens of the Admin console.
6	Minor UI fixes in the Identity Provider & Directory Sync Profiles screen.
7	Other minor issues in the console were addressed.

Known Product Issues

1. If users have the ZTAA agent open when a new network application is added to the Access policy, then users will need to restart the agent for the application to show online in the agent. Until the agent is restarted, the newly added network application will be accessible from the network gateways but will show Offline/Grey in the agent.
2. Network applications will show unstable and will not be accessible when a user logs into the ZTAA agent from a Windows 8.1 Pro 32 bit or 64 bit machine. Network applications will be accessible only after clicking on the Refresh button in the agent.
3. MAC users who are on the production ZTNA version 4.13.0.0 will not get upgraded to the latest ZTNA version automatically. A system restart will need to be done for the latest ZTNA version to be upgraded.
